

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 10/1/05 and 9/30/06.

For comparison purposes, the following shows the Midwest Electric Power Industry averages for sources of electricity generation and emissions for 2001*. 92 percent of ComEd's electricity is generated by nuclear power, 0 percent is generated by natural gas-fired power, and 1 percent is produced by biomass. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 95% less than the Midwest Electric Power Industry average for carbon dioxide, 97% less for nitrogen oxides, and 99% less for sulfur dioxide.

(Midwest Electric Power Industry Sources—rounded to the nearest whole percent)

Coal-fired power	70%
Hydro power	less than 1%
Natural gas-fired power	4%
Nuclear power	24%
Oil	less than 1%
Renewables	1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Electric Power Industry Emissions—pounds per 1,000 kilowatt-hours)

Carbon dioxide	1,573.57 lbs.
Nitrogen oxides	5.29 lbs.
Sulfur dioxide	14.03 lbs.

ComEd CFL Discount Program Exceeded 1 Million Bulb Goal

ComEd successfully completed its CARE (Customers' Affordable Reliable Energy) 1 Million Compact Fluorescent Light (CFL) Bulb Discount Program. Residential customers exceeded program goals by purchasing more than 1.2 million energy efficient light bulbs at nearly 350 participating retailers since the initiative began on October 1, 2006.

By using these energy efficient bulbs, ComEd residential customers collectively could reduce their overall electric use by about 79 million kilowatt-hours in the coming year, or the amount of energy needed to annually power 8,200 average area homes, and save up to \$7.4 million annually on their electric bills, or about \$6 in savings per year for each CFL installed.

The ComEd CARE 1 Million CFL Bulb Discount Program is the largest privately funded energy efficiency lighting promotion ever carried out in the Midwest. For more information on energy efficiency and low-income assistance programs, visit www.ComEdCare.com or call CARE's toll-free hotline (888)806-CARE (2273).

Replacing six 60-watt incandescent bulbs with comparable CFL bulbs may yield savings of up to 4 percent on a household's electric bill, or \$120, over the lifetime of the bulb.

Environmental Disclosure Information

Twelve Months Ending September 2006

ComEd's Louie the Lightning Bug helped spread the word of the company's CARE 1 million Compact Fluorescent Light Bulb Discount Program along Michigan Avenue in downtown Chicago in early October.

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

Sources of Electricity Supplied for the 12 months ending September 30, 2006	Percentage of Total
Biomass power	1%
Coal-fired power	4%
Hydro Power	0%
Natural gas-fired power	0%
Nuclear power	92%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	3%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending September 30, 2006

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWh) for the 12 months ending September 30, 2006	
Carbon dioxide	72.2 lbs.
Nitrogen oxides	0.14 lbs.
Sulfur dioxide	0.14 lbs.
High level nuclear waste	0.006 lbs.
Low level nuclear waste	0.0005 cubic feet
